3. The following is an examiner's statement of reason for allowance:

The prior art fails to teach or suggest a display device comprising a plurality of pixels, each of the pixel comprising: a serial-to-parallel converter converting a serial digital image signal supplied serially to the display device to a parallel digital image signal; a DA converter converting the parallel digital image signal to an analog image signal; and a pixel electrode configured to receive the analog image signal, wherein the serial-to-parallel converter is connected to a drain signal line supplied with the serial digital image signal, and comprises a plurality of pixel selecting transistors connected to the drain signal line and a plurality of shift registers, each of the shift registers supplying a sampling pulse to a gate of a corresponding pixel selecting transistor for sampling the serial digital image signal at a predetermined timing as claimed in claim 2.

The prior art fails to teach or suggest a display device comprising a plurality of pixels, each of the pixel comprising: a serial-to-parallel converter converting a serial digital image signal supplied serially to the display device to a parallel digital image signal; a DA converter converting the parallel digital image signal to an analog image signal; and a pixel electrode configured to receive the analog image signal, wherein the
